### Working model preparation and demonstration on routes of drug administration:

To learn the techniques of routes of administration, students were instructed to prepare different “working Models” on routes of drug administration by students in practical class for learning skills of drug administration. Students participated enthusiastically and learned basic techniques of administering the drug via following routes:

- Intradermal
- Subcutaneous
- Intramuscular
- Intravenous
- Inhalational

All students were divided in the group of 5 and they explained about

- Preferred sites for administration,
- Proper technique, and
- General instructions for its use.
